Protection against any threat

Wireless fire detectors recognize a temperature rise, smoke, and dangerous CO levels. The devices are equipped with a built-in siren for alerting to alarms and events. The detectors can operate as part of the Ajax security system or autonomously without a hub.

The category includes the FireProtect 2 series of advanced fire safety detectors and the ManualCallPoint wireless wall-mounted buttons for manual fire alarm activation. All products deliver informative notifications to Ajax apps and support automation scenarios.

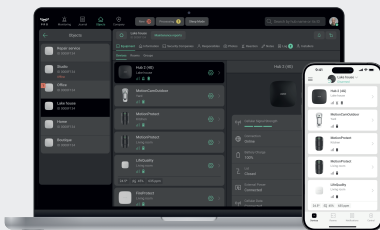

Key features

Two-way radio communication
Up to 1,700 m
 in an open space

Advanced sabotage protection
 and supervision of each
 system element

Remote configuration
 and control via Ajax apps

Effortless installation
 and maintenance

QR code

SmartBracket

App

Interconnected fire alarm
 activated within 20 seconds

Continuous supervision
 of each system component

Alarm hushing via Ajax apps or with the wireless Button
