IndoorCam

Professional security and AI. Domesticated.

IndoorCam combines advanced security technology with smart home convenience, offering a professional-grade Wi-Fi camera to protect homes and businesses. Equipped with a PIR sensor and a wide-angle HDR camera powered by AI, the device can detect people, animals, and vehicles, as well as deliver excellent image quality. IndoorCam also upholds Ajax's signature privacy features, seamless integration, and reliable backup options.

NDA
Compliant

Reliable connection at all times

Ajax IndoorCam uses Wi-Fi as its primary communication channel. The device is designed to amplify the signal and reduce radio interference, which ensures a more stable connection over greater distances.

Connecting IndoorCam to an Ajax hub enables a fallback communication channel. This feature allows the device to continue transmitting events, alarms, and photos through the secure proprietary Jeweller and Wings radio protocols, even if the Wi-Fi connection is lost.

Key features
