

## Solutions for rental property

Intelligent protection and efficient management in one Ajax system

## Remote property management made simple and secure

Ajax Systems provides advanced security solutions for rental property. They are perfectly adapted for short-term rentals like those offered on the Airbnb marketplace. The system ensures comprehensive control and automation of access to premises with the help of smart detectors, Ajax mobile app control, and advanced remote monitoring capabilities. Property owners can guarantee guest safety, protect their belongings from possible damage, and gain real-time supervision without violating tenants' privacy.

Intrusion protection

Fire and life safety

Automation

Electric lock control

Water leak prevention

# Why Ajax

Wireless devices operate on pre-installed batteries for up to 10 years, significantly reducing maintenance efforts and ensuring long-lasting performance.

Flexible system management and configuration in one intuitive app. Employees can learn how to use the system in minutes and with a few taps.

It is possible to add other detectors or devices to an existing system at any time to expand or upgrade it.

The detectors can run a scenario, forcing an electric valve to shut off the water within 7 seconds to prevent damage to expensive items or recent renovations in the apartment.

Integration with Yale smart locks allows users to manage the locks easily via an Ajax app. The app provides instant remote control, real-time notifications, and automation options to enhance convenience and security.

The system supports up to 64 automation scenarios. This allows users to enhance security, optimize energy use through monitoring, and minimize maintenance efforts through remote control, which reduces on-site visits.

The system can be installed in a matter of hours at any site regardless of size and easily relocated to protect another facility if needed.

The system can be connected to a central monitoring station (CMS) for professional control while providing the owner with comprehensive property control.

Electrical appliances and lighting can be easily managed through Ajax apps. This saves costs due to precise energy consumption and helps minimize the fire risk.
